

Induction loop

– Accessibility for hearing aid users

A hearing loop is installed in this room. The induction loop, which is connected to the audio system, is adjusted by the installer and settings must not be changed.

With an induction loop hearing aid users can adjust their hearing aid into T position and get the sound directly into the hearing aid.

Do not forget to check if the induction loop works prior to each meeting (use the Univox Listener), while checking the sound system!

Induction loop

– Accessibility for hearing aid users

A hearing loop is installed in this room. The induction loop, which is connected to the audio system, is adjusted by the installer and settings must not be changed.

With an active induction loop hearing aid users can adjust their hearing aid into T position and get the sound directly into the hearing aid.

Do not forget to check if the induction loop works prior to each meeting (use the Univox Listener), while checking the sound system!
